

Password Reset Guide

Resetting Your Password via Email

If you have forgotten your password, go to the login page and click "Forgot Password." Enter the email address associated with your account. You will receive a password reset link valid for 30 minutes. If the link expires, simply request a new one.

Step-by-Step Instructions

- 1 Navigate to the login screen and click "Forgot Password."
- 2 Enter your account email address and submit the form.
- 3 Check your inbox for an email titled "Reset your password."
- 4 Click the secure link inside the email within 30 minutes.
- 5 Enter a new password that is at least 10 characters long and includes one number and one symbol.
- 6 Confirm the new password and click "Update Password."
- 7 You will be automatically logged in and redirected to your dashboard.

Two-Factor Authentication (2FA) Lockouts

If you are locked out due to a lost 2FA device, use one of your backup recovery codes generated when you first enabled 2FA. If you do not have a backup code, contact support with a government-issued ID for manual identity verification before 2FA can be disabled on your account.

Password Requirements

- Minimum 10 characters in length.
- At least one uppercase letter and one number.
- At least one special character (e.g. !, @, #, \$).
- Cannot reuse any of your last 5 previous passwords.

Troubleshooting: Reset Email Not Received

Check your spam or junk folder first. Reset emails are sent from no-reply@example.com, so add this address to your contacts to avoid future filtering. If 15 minutes pass with no email, verify you entered the correct address, then request a new link. Accounts created through a Google or Microsoft single sign-on cannot reset a password this way; instead, reset your password directly with that identity provider.
